

帝国cms自定义列表多表查询统计代码

统计记录:

```
select count(*) as total from [!db.pre!]ecms_news union select count(*) as total from [!db.pre!]ecms_movie
```

查询记录:

```
select classid,id,titleurl,title,newstime from [!db.pre!]ecms_news union select classid,id,titleurl,title,newstime from [!db.pre!]ecms_movie order by newstime desc
```

-----注释 : -----

以上调用的是（新闻模型：news、电影模型：movie）两个模型的文章，两个模型用"Union"连接调用

若指定栏目用：where classid in(46,47,51) ,

若调用推荐在其后追加：and isgood=1 ,

若指定调用条数在其后追加：limit 10
